

*CHESTER VISUAL  
IMPACT ASSESSMENT*

*Chester, New York*

CLA SITE provided full Visual Impact Analysis (VIA) services for a proposed mine expansion. The VIA included a complete digital and on-site field inventory of potential opportunities to view the mine activities and an analysis of how existing views will change if the new mine proposal is implemented.

Eleven photo locations were geographically referenced and digitally modeled to determine the visual impact of the proposed mine. The two locations shown on this page represent some of the greatest visual impact locations and show the capabilities of CLA SITE at representing future views.
